Core180 Expands Reach Into Key Federal Government Facilities

Delivers Additional Capacity at Ten Locations

Fairfax, Va. and Hoboken, N.J., January 19, 2010 – Core180, a leading telecommunications network integrator, announced today that it has expanded its on-net footprint to provide private, dedicated and high capacity managed access services to ten additional defense locations. These include Jacksonville Naval Air Station, Patuxent Naval Air Station, Fort Benning, Fort Stewart, Fort Lee, Fort Dix, MacDill Air Force Base, Stennis Space Center, Fort Meade, and the Army Research Lab in Adelphi, MD.

Core180 continues to provide high capacity circuits into more than 30 strategic government facilities. Currently deployed example locations include The Pentagon, Fort Belvoir, Fort Bragg and Camp Lejeune.

“We are proud to do our part to meet the demands of the Government and partners requiring high capacity and secure access to these locations,” said Jerry Edgerton, Core180 President of Government Markets. “Core180’s managed access service bridges the gap between military bases, Government locations and major carrier interconnection Points of Presence (PoPs). Because the solution is facilities-based, Core180 can provision bandwidth rapidly, with full monitoring of the circuits to ensure the superior availability required for the mission critical applications our clients come to rely.”

By bringing these locations on-net, Core180 can provide its clients with rapid provisioning support for dedicated and secure bandwidth services. Leveraging technologies such as Wave Division Multiplexing and Ethernet, Core180 provides services to key Civilian, Military, Defense and Intelligence facilities.
