Core180 Receives 1000th Order for Telecommunication Circuits

Fairfax, Va., and Hoboken, N.J., July 29, 2008 – Core180, the leading telecommunications network integrator, today announced it has received its 1000th customer order for circuits. The company started just over two years ago and quickly gained traction with large buyers of telecommunication network services including being selected as the sole subcontractor for a major multibillion dollar telecommunications contract for the government.

“This is a major milestone for us and proves our unique model for the next generation of private networks,” says David Baule CEO of Core180.

Utilizing the Core180 platform, the company offers “purpose-built” network designs and deployments that combine the services, carriers and buying strategies from best-in-class providers. This enables users to leverage multiple carrier vendors and experience enhanced network visibility while reducing expense. The recent upgrade of the platform to 10 Gbps adds capacity that allows customers to receive both SONET and Ethernet solutions in the network core as well as to the edge.

About Core180

Core180 (www.core180.com) utilizes its own proprietary platform to develop purpose-built networks for customers. These solutions allow users to better leverage their carrier vendors and enable choice and flexibility in the “last mile” access solutions. The company serves large enterprises, system integrators, government agencies as well as facility and non-facility based telecommunications carriers. Core180 is headquartered in Metro New York (Hoboken, N.J.) with operations in the Washington, D.C. region (Fairfax, Va.).
