Core180 Adds 18 US Military Locations to Its Telecommunications Network

Fairfax, Va., and Hoboken, N.J., August 26, 2008 – Core180, the leading telecommunications network integrator, today announced it has successfully added 18 US military locations throughout the country to its growing telecommunications platform as part of a private network for the federal government. In 2006, Core180 became the sole subcontractor on a major multibillion dollar [telecommunications contract](#) for the government.

“The US government has been able to realize significant savings by taking advantage of our unique model for the next generation of private networks,” says Mark Ritter, senior vice president of DATS for Core180. “Core180 continues to successfully grow as our government and enterprise clients leverage the cost savings and ease of use afforded by our platform.”

Utilizing the Core180 platform, the company offers “purpose-built” network designs and deployments that combine the services, carriers and buying strategies from best-in-class providers. This enables users to leverage multiple carrier vendors and experience enhanced network visibility while reducing expense. Core180 recently upgraded the platform to 10 Gbps, adding capacity that allows customers to receive both SONET and Ethernet solutions in the network core as well as to the edge.

About Core180

Core180 (www.core180.com) utilizes its own proprietary platform to develop purpose-built networks for customers. These solutions allow users to better leverage their carrier vendors and enable choice and flexibility in the “last mile” access solutions. The company serves large enterprises, system integrators, government agencies as well as facility and non-facility based telecommunications carriers. Core180 is headquartered in Metro New York (Hoboken, N.J.) with operations in the Washington, D.C. region (Fairfax, Va.).
