

## core180 Access Services

### Improved Local Service Options

Core180 has streamlined the complex telecommunications landscape by providing comprehensive local loop options which facilitate efficient and cost effective network expansion.

Combined with Core180's powerful purchasing agreements, Access enhances buying strategies for local connectivity as well as increasing your options for additional network services.

Traditional purchasing models are limited by carrier proximity to the customer premise and further constrained by the number of providers that can deliver service to a specific address.

To resolve this problem, Core180 has developed the first fully integrated supply chain management system of its kind. The Core180 platform substantially increases access options and reduces costs by moving the demarcation point from your location to a carrier neutral facility, immediately putting you on-net to a wealth of providers in your area.

To physically connect your location to the platform, Access synchronizes with Core180's Demarc service, enabling interconnection with hundreds of network providers mapped to thousands of markets, office complexes and specific locations.

The result is dramatically increased network options, greater efficiencies, improved purchasing power and smarter solutions.

## core180 Advantages

**Coverage** - Delivers local access services to any endpoint in North America

**Choice** - Utilizes our proprietary carrier database to locate the right carrier at the best price

**Easy Integration** - Ties directly into the Core180 platform, enabling interconnection to all area network providers

**Proven Providers** - Carrier selections limited to Core180's trusted partners

## core180 Operational Flexibility

**Leverage** - Physical proximity to carriers and increased provider options lowers access costs

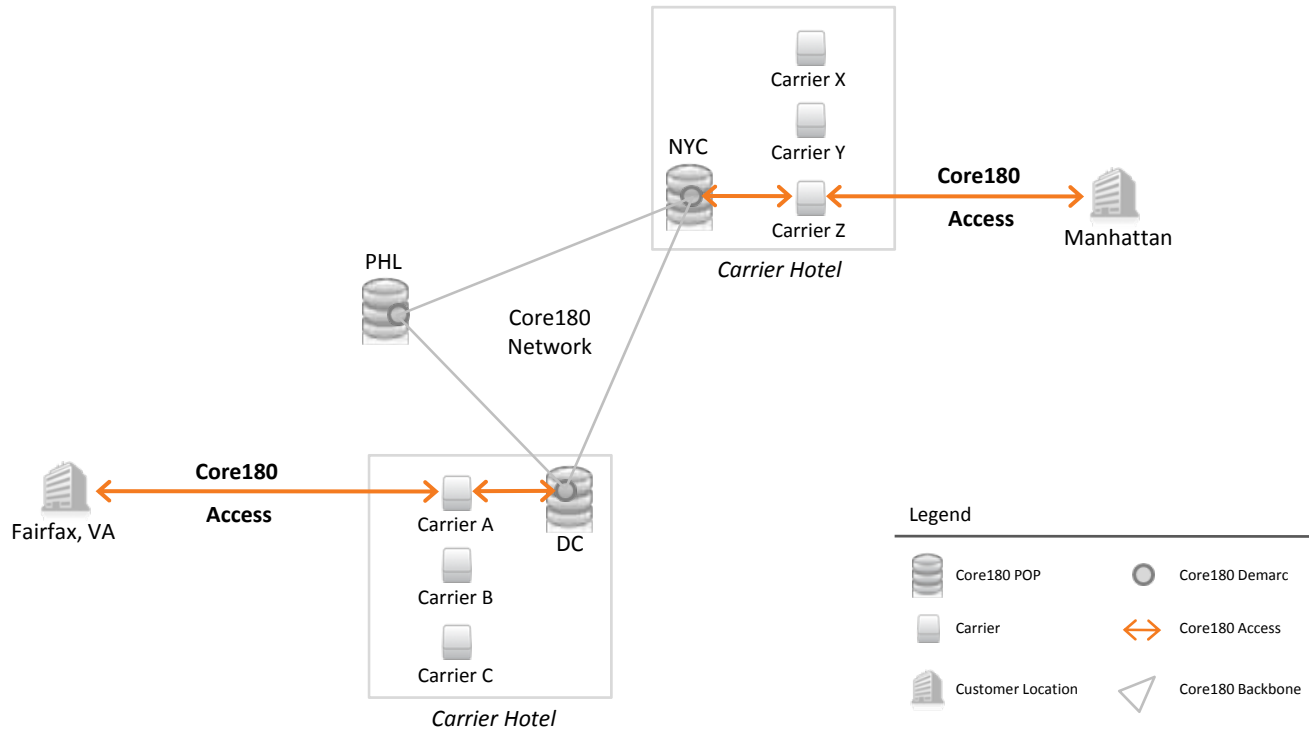

**Fully Managed** - Reduces operational expenses

**Enhanced Support** - Provides complete resolution to local connectivity issues with just one call

**Extendable** - The Core180 platform greatly increases local provider options

## core180 Access Services

In this example, Core180's customer has an office building in Fairfax, VA and another in Manhattan, NYC. Core180 procures the local loops from Carriers A and Z and manages the connections for the customer. The access circuits tie into the Core180 platform via Demarcs located at Core180 POPs in DC and NYC.

## About core180

Core180 is uniquely positioned to drive the future of how network access and connectivity is designed and purchased. Leveraging its proprietary platform, Core180 develops and manages Purpose Built networks.

The Core180 model is an evolutionary change for large network users, enabling them to gain control of their connectivity options and enhance provider selections through proximity, choice and carrier neutrality. Core180 delivers solutions that help customers expand their telecommunication infrastructure while realizing cost savings, embracing future technologies and leveraging existing carrier offerings without additional capital expense or personnel.

Core180's carrier grade platform provides advantages for individual circuits, multiple sites or completely distributed network deployments. All Core180 services are architected for scalability, immediate ROI and are designed to meet the needs of complex enterprises and governmental organizations.
